

# Sustainability is at the Core of Brandon Industries

At Brandon Industries, sustainability isn't just a feature; it's a foundation. As a leading U.S. manufacturer of LED lighting, solar lighting, decorative street signs and poles, and mail and parcel solutions for streetscapes, communities, and commercial spaces, we take our environmental responsibility seriously. Every step in our process, from smart material selection to energy-efficient operations, is designed to minimize waste and maximize performance.

Our mission is to provide sustainable lighting and streetscape solutions that support our clients' goals and the environment we all share. Whether you're a city planner, contractor, landscape architect, or developer, partnering with Brandon Industries means making a smart, eco-conscious choice for long-term value.

## Sustainability isn't just a feature; it's a foundation.

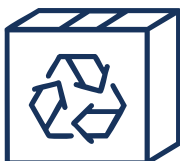

### Material Efficiency Through Smarter Engineering

Brandon Industries designs products with material efficiency in mind, ensuring every part is purposeful and never excessive. Many of our non-structural components are produced using aluminum die casting, which allows us to create precise, lightweight parts with minimal waste.

### Closed-Loop Waste Reduction and Recycling

Every ounce of aluminum scrap generated during our production process is collected and delivered to a certified scrap yard, reentering the supply chain as recycled material. We have clear internal protocols for all other recyclable content, such as cardboard, shrink wrap, and plastics, to ensure they are sent to appropriate recycling streams instead of landfills.

### Recyclable and Bulk Packaging Solutions

Our packaging program is designed with sustainability and logistics in mind. Nearly every Brandon Industries product ships in 100% recyclable materials, including cardboard cartons and recyclable plastic bags. These materials are easy for customers to dispose of responsibly and are widely accepted by commercial recycling programs.

### **RoHS-Compliant Electronic Components**

Brandon Industries uses RoHS-compliant components across our electronic product line, ensuring that every lighting system we deliver is free from harmful substances like lead, mercury, and cadmium. This global standard guarantees that our products are safe, sustainable, and suitable for use in both commercial and public environments.

### **Our Facilities Run on LED Lighting**

We practice what we preach. Every facility fixture—from high bays and wall packs to LED panels—is an energy-efficient lighting solution. By using the same technology we deliver to our clients, Brandon Industries reduces operational costs and lowers our carbon footprint.

## **Build with a Partner Who Builds Sustainability**

When you choose Brandon Industries, you're not just investing in lighting, poles, or signage. You're partnering with a manufacturer who values efficiency, compliance, and environmental responsibility as much as you do.

We lead with integrity and innovation, from sustainable product designs and recyclable packaging to RoHS compliance and LED facility operations. If your project requires long-lasting performance and a lighter environmental footprint, we're ready to help.
