

## Apartment & Condo Solutions

Thoughtfully designed outdoor spaces enhance tenant satisfaction and encourage long-term retention. By incorporating premium amenities and stylish fixtures, multi-tenant communities gain a sense of exclusivity and luxury that makes them more desirable.

### Street & Pathway Lighting

Appropriate lighting for safety in parking areas and entrance doors is required for apartments and multifamily locations, but lighting options for greenspace and communal areas must also be considered. These fixtures may include decorative light posts, lighted bollards, and pathway lighting.

### Cluster Box Units & Mailboxes

Many apartment complexes utilize cluster box units (CBUs) to handle post and parcel deliveries for residents. Developers have a choice of 2 types of cluster mailbox units to install: pedestal-mounted CBUs or wall-mounted mailboxes. Both types are “package friendly” to accommodate most packages delivered through the US Mail. CBUs also include parcel lockers, which provide separate locked storage for many packages.

### Decorative Street Signage

In multi-tenant facilities such as condominiums and apartment complexes, signage plays a critical role in both function and aesthetics. Directional signs help residents and visitors easily navigate the property by clearly identifying building numbers, unit locations, amenities, and entrances, which reduces confusion and enhances convenience.
